

○ **Helping protect  
the dark night sky**

Dear

From

I visited this observatory the other day, it had a wicked telescope. So cool. I got to see the stars up close. The night sky is unreal. Found out scientists use telescopes to study the stars and find stuff, like spacemen, hehe. And these scientists need less light pollution for their research, so the night sky needs to be really dark. Anyway, you gotta check out this place, it's amazing. Reduce light and see the stars burn bright. Chat later.
